Brand New Book ***** Print on Demand *****.Excerpt from The Muscles of the Eye, Vol. 1 of 2: Anatomy and Physiology Including Instruments for Testing and Methods of Measurement The importance of this subject becomes apparent when it is remembered that abnormal conditions of the ocular muscles - including those involved in accommodation - constitute, for most ophthalmologists, by far the largest group of cases presented for treatments. Opticians also have to deal constantly with questions in which the ciliary muscle is a factor, and even if they limit their work to giving glasses for presbyopia and hypermetropia, it is desirable that it be done intelligently. All physicians are confronted at times by the numerous reflexes associated with faulty action of the ocular muscles, while their partial or total paralyses are important guides for the neurologists in diagnosis and treatment. And yet the widely differing views concerning many fundamental facts and principles indicate that thus far we have succeeded only in accumulating a considerable amount of ignorance in regard to this subject. Indeed, there is hardly any branch of medicine about which so much...
