Forgotten Books, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book ***** Print on Demand *****.Excerpt from Mechanical Drawing: Technique and Working Methods, for Technical Students A thorough preparation in drawing for a course in engineering or in architecture should include the study of descriptive geometry or the principles of representation; the training of the sense powers to give precision and facility in the technique of drawing; and instruction in practical freehand drawing. This book, treating of the second of the requirements named and of technical methods in execution, has been prepared for use in the first-year courses in drawing and descriptive geometry at the Massachusetts Institute of Technology. It is not intended as a prescribed set of exercises to be taken in the same form by all students, but rather as a collection of material sufficient to enable the teacher, by judicious selection, to lay out the work of a course, whether designed solely for educational training, or as an introduction to a particular course in engineering or architecture, or for a further specialization to meet the need of individual students. To make up as far as possible for the inevitable loss, in large classes, of individual instruction in details - so necessary for the best results in technique - a large number of explanatory cuts has been introduced and minor processes have been fully explained. This detailed presentation, together with the subjects considered briefly in the last chapter, should, it is believed, make the book useful for reference in the student s future professional work. The subject of projection, usually presented in text-books on mechanical drawing has been here omitted in the belief that, when a course includes descriptive geometry, it is unnecessary to give a portion of this subject...
